Detailed description of the project:

Improvement and acceleration of the process of land allocation and the regularization of public lands under the Legal Land Program in four states through the provision of specialized services for technical assistance, studies, and advice to the competent federal and state agencies. The project with the European Commission will assist the Extraordinary Undersecretary for Land Regularization at Legal Amazon – SERFAL - on issues related to efficient land governance and management, proposing and developing thereby innovative approaches. The specific objective is to improve and accelerate the process of land allocation and the regularization of public lands under the already existing Legal Land Program.

GEO CONSULT INTERNATIONAL GMBH & CO. KG

Detailed description of services provided:

- Support the evolution and updating of the SIGEF Land Management Program.
- Assist the development and implementation of a SIGEF module to follow up on the operative clauses and updating according to local government policies.
- Support the integration between SIGEF and other databases to guarantee land regularization and analysis of operative clauses.
- Improve the initial regional assessment of demands for land tenure regularization including impact and risk/difficulty evaluation.
- Analyse public policies for small-scale agriculture and their potential for integration with land tenure regularization activities.
- Conduct work meetings with partner institutions and Federal and State governments to improve the integration of public policies on land tenure regularization.
