NELGA Land Data HUB logo

Inception workshop at RCMRD in Nairobi

Detailed description of services provided:

The specific objective of this project is to develop a single continental portal with access to knowledge on land related information relevant to land governance in Africa; to open up access to relevant resources – reports, research papers and publications – setup repositories for land-related data and define roles of NELGA partners and NEPAD helpdesks; establish live links enabling the exchange of information with project partners and stakeholders; build an integrated web portal that provides seamless communication with data services for hosting, visualizing, searching, analyzing, geoprocessing, publishing and administering resources collected from partners and stakeholders; if required: store and migrate initial data from various sources into the single database of NELGA Land Data Hub.

(<https://datahub.nelga.org>)

The availability and accessibility of land and tenure related information shall be improved significantly by implementing the NELGA Land Data Hub for authorities, international organizations, researchers and the public.
