Central square in front of the municipality of Tirana

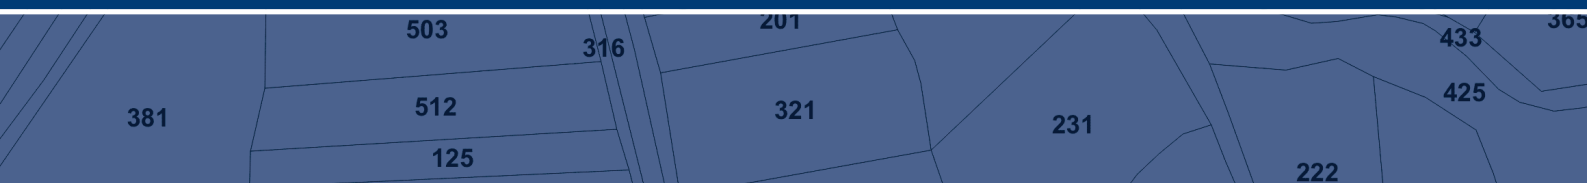

Public busy life in Tirana

The main project characteristics are:

The municipality of Tirana will be supported in establishing methodologies and technical tools to manage effectively their communal Land Management tasks like zonal and urban planning, land related taxes and administration of communal real estates.

Therefore adequate cadastral and other spatial data with regard to quality and quantity should be used for communal purposes of planning and administration. To realize that ambitious aim, step by step an object related GIS will be developed and established, following the needs of the municipality and supporting automated analysis procedures.
